Food & Cooking Survey

In this class activity, students ask and answer questions about food and cooking habits.

Before class, make one copy of the worksheet for every 16 students and cut into cards as indicated.

Procedure

Give each student a card and allow them time to read it. (If there are more than 16 students, use some of the cards twice.)

Tell the students that they have to find out the information stated on their card by asking each student in the class a question.

Examples:

Find out how many people in the class can crack an egg without breaking the yolk.

Can you crack an egg without breaking the yolk?

Find out how many people in the class like to eat raw vegetables

Do you like to eat raw vegetables?

When the students have created the question they need to ask, let them go round the class asking and answering their questions.

The students should make a note of the number of people who answer yes and no to their question.

When everyone has finished, ask each student to tell the class their findings. Then, discuss the food and cooking habits of the class.
